If you're at the shore, chances are there's a whale-watching tour nearby. While whale watching seems to have become ubiquitous, and while spotting a breaching whale is certainly magnificent, there's an alternative that provides a more unique experience: dolphin watching. While dolphin sighting might not be the king of offshore excursions just yet, there's no denying the thrill of seeing a pod of these graceful marine mammals swimming past your boat. Unlike whale watching, where it can take hours to see a single whale — and even then, the whale isn't going to great lengths to give you a show — dolphins almost always travel in groups and are known for their lively energy. Here are the best places in the world to go dolphin watching. 1. Iceland Photo: jonanderswiken/Shutterstock Iceland is arguably the best place in the world for dolphin watching. When it comes to sheer variety, it's certainly tough to beat. Seven different species of dolphin swim off Iceland's shores, including white-beaked dolphins, white-sided dolphins, striped dolphins, bottle-nosed dolphins, common dolphins, killer whales, and pilot whales (yes, the last two are technically dolphins). For white-beaked dolphins alone, there are an estimated 30,000 around the coasts of Iceland. Although the controversial practice of whaling is popular in Iceland, that does not apply to dolphins. There has never been a culture of widespread, active dolphin hunting in Iceland, which is good news for those hoping to see the creatures in abundance. Several boat tours get you up-close and personal with dolphins, as well as provide panoramic views of the sub-Arctic landscape. Salka Tours departs from Husavik in the north and allows visitors to glimpse dolphins, whales, and even puffins. 2. South Padre Island and Port Isabel, Texas Photo: Judy Marshall/Shutterstock The Gulf of Mexico is one of the best places in the US for dolphin watching, particularly South Padre Island and Port Isabel. Conveniently, the Sea Ranch Marina operates dolphin watching adventures in both Texas locations. Sea Ranch One, off South Padre Island, provides access to Laguna Madre Bay, where you will see not only bottlenose and spinner dolphins but also catfish, flounder, kingfish, ladyfish, smooth butterfly rays, blacktip sharks, and more. Located at Southpoint in Port Isabel, Sea Ranch Two offers dolphin-watching excursions and even glass-bottom boat rides for the optimal viewing experience. There are also several dry stack slips available at Sea Ranch Two, in case you'd like to bring your own boat. 3. Key West, Florida Photo: smikemykey1/Shutterstock Key West is known as one of the most popular vacation spots in the US, mainly due to its beaches, but its most enticing asset is actually its dolphin population. The most common dolphin here is the bottlenose, with an estimated 300 of them residing here regularly. What really sets Key West apart from other dolphin-heavy areas are the interactive experiences, with a variety of opportunities to dive and swim with the dolphins, and observe them in their natural habitat. Fury's Key West Dolphin Watch and Snorkel Tour brings you on a catamaran trip through shallow reefs, where you can snorkel right alongside the dolphins. The tour operators are Dolphin SMART certified, meaning the company has been recognized as responsible and unintrusive to the dolphin's environment. There's also an area called Dolphins Playground, located in Key West's shallow backcountry. This breeding ground for dolphins is surrounded by mangroves, and it's a great place for visitors to go dolphin-watching. 4. Hong Kong Photo: pruit phatsrivong/Shutterstock Hong Kong is one of the most unique places to see dolphins in the world because it's home to the rare pink dolphin. First spotted in the 17th century, pink dolphins are also known as Chinese white dolphins because adults can be either pink or white. When they're born, they are initially colored black, then slowly turn grey before developing their pink or white hue. Although there are only a few hundred dolphins in the waters around Hong Kong, the dolphins living there are quite active, and you're likely to see several on a tour. Hong Kong Dolphinwatch operates cruises from Hong Kong Harbor, which run about three-four hours and usually result in several dolphin sightings. Unfortunately, habitat loss, pollution, and vessel collisions have reduced the already low Hong Kong dolphin population recently, so if pink dolphins are on your bucket list, you'd better plan a visit soon. 5. The Indus River, Pakistan Photo: GoProPk/Shutterstock For the villagers on the banks of Pakistan's Indus River, living alongside dolphins is commonplace. For visitors, however, it's one of the most unique dolphin-watching experiences in the world. Rather than viewing the creatures in a controlled playground, or taking a guided snorkel tour, here you can get a truly rugged tour steeped in local tradition. The Indus Dolphin Boat Safari is your best bet. The safari is run by the people who live and work along the river, operating wooden boats propelled by oars and sails. These boats are used to minimize disturbance to the animals and be as non-invasive as possible. The safari does not allow people to actually go into the water to swim with the dolphins, but you'll be able to listen to their sounds using a hydrophone. This tour allows you to not only get familiar with the river's dolphin population but also brings you on a more comprehensive multi-day adventure. Beginning in Lahore, you'll drive Taunsa Barrage, where you will spend the night camping. The next day you'll go boating on the Indus river from Taunsa to Shar Gharbi, camp overnight, then spend another day on the boat in Ghazi ghat. On the fourth day, you'll return to Lahore via car from Ghazi. 6. Scottish Dolphin Centre, Scotland Photo: Chanony/Shutterstock For dolphin watching in the UK, there's really only one place to go for the most comprehensive experience, and that's the Scottish Dolphin Centre at the mouth of the River Spey. The center offers land-based dolphin watching where you can see some of the largest bottlenose dolphins in the world, and there's also an entire facility dedicated to dolphins and other aquatic animals. It has an exhibit on giant whale bones, a video that lets you see the ocean through the eyes of a dolphin, and a huge house made of ice. In addition to seeing dolphins, on guided walking tours you can also spot seals, gannets, otters, and more. If you'd rather venture on your own, you can take the Speyside Way solo and explore the footpath at your leisure, enjoying fantastic views down the river. Don't be discouraged just because you can't board a boat for the tour — sightings are quite common, as there are plenty of active dolphins swimming close to shore. And the data collected from the sightings helps inform conservation decisions. 7. Bohol, Philippines Photo: Alex. Shevchenko/Shutterstock It might be a long flight to the Philippines, but it's worth it. You might go to the Philippines for the pristine white beaches, but the dolphins might just be the most memorable part of your trip. The Bohol Sea is home to risso's dolphins, bottlenose dolphins, spinner dolphins, spotted dolphins, melon-headed whales, dwarf sperm whales, short-filled pilot whales, Bryde's whales, and even the occasional blue whale. Although the sea around Bohol used to be popular among whale hunters, new marine preservation laws have banned hunting, and whalers now operate guided whale- and dolphin-watching excursions. Most dolphins can be spotted in the sea around Pamalican Island, and it's common to see large pods. Since the dolphins are most active at night and in the early morning, a dawn tour will probably give you the best views. Several tour options are available, many of which also offer the opportunity to get in the water and snorkel with the dolphins. You hear that? A Quiet Place 3 news just broke and it's really confusing. While the film is definitely, actually happening, Paramount's new language around it is very odd. For as much as we may question what the heck will happen in this film, and who will star in it, it's got another new release date. And that's on top of the news of who won't be working on it anymore. But after A Quiet Place 2 took a whopping \$58 million on its opening weekend, we know for certain that the demand for more muted horror mayhem will be there. And though the sequel was no doubt helped along by cinema rebounding after Covid-19 fractured films' production timelines, A Quiet Place 2 was a blinding success. It even managed to set the record in the US for a post-pandemic release. If you've already seen the second film and are pining for more, then the good news is that director John Krasinski has reportedly always had a treasure trove of ideas floating around for new stories, since even before A Quiet Place 2. The post-apocalyptic world of A Quiet Place, it seems, has many more stories buried within it, with Emily Blunt (opens in new tab) saying that Krasinski has a "whole arc of new ideas" for future tales. One quick browse of the web, though, throws out a muddled pile of overlapping and downright confusing info about what exactly A Quiet Place 3 as a title, project and film will constitute. There's been lots of talk over whether that's a straightforward threequel directed by Krasinski or, indeed, a spin-off movie. A Quiet Place 3 won't be an official three-quel in the purest sense, as Deadline (opens in new tab) has reported that the spin-off is now being officially billed as the third installment of the monster film series from an idea stemming from the mind of Krasinski, "broadening the post-apocalyptic world introduced in the first two movies." This project could see a bunch of different characters in a new location, still under siege from the same breed of marauding predators from the OG films. But, really, the jury is currently still out on what to expect. Read on below to find out everything we know about A Quiet Place 3 and what it's tipped to be. A Quiet Place Part III isn't the next installment of the franchise — and whatever that movie is, is coming in 2023. A Quiet Place Part III is now coming in 2025. Michael Sarnoski is directing A Quiet Place Part III (Image credit: Paramount) This is really confusing. Paramount Plus tweeted that "The next installment of @quietplacemovie is coming next year & will be directed by Michael Sarnoski. And #AQuietPlace Part III is coming in 2025." So, there you have it. A Quiet Place Part III is one of two Quiet Place movies coming out, and it's not coming until 2025. Who knows what the heck the 2023 movie is. Although Deadline (opens in new tab) initially said that A Quiet Place 3 (which was to be written and Mud and Midnight Special director, Jeff Nichols) would release sometime in 2022, that's no longer the case. Paramount (opens in new tab) then moved it to March 31, 2023. Unfortunately, Deadline (opens in new tab) also reported that Nichols and Paramount have parted ways on the project. While this is partially concerning because of an interview with Empire (opens in new tab) published on July 15 where Krasinski stated that Nichols was "truly the only person I had in mind when asked whether I would hand this off," don't give up hope. The same Deadline report states "Sources say top agencies already are submitting options for Nichols' replacement and the studio will act fast as this film is still a high priority after A Quiet Place Part II just became one of the bigger box office hits of the year." A Quiet Place 3 cast If this story does indeed traverse into a different but parallel narrative amidst the monster-ridden world of A Quiet Place, we surely wouldn't expect that Blunt, Jupe, Symons or the newest cast member from film number two, Cillian Murphy, will reprise their characters. (Image credit: Paramount) Potentially there is room for some cameo spots, but it makes more sense for a completely new story with new characters and cast members. A Quiet Place 3 plot (Image credit: Paramount) Much of what happens in A Quiet Place 3 will likely rely on how this movie interlinks with the world of the previous two films. It could bridge the story between A Quiet Place 2 and A Quiet Place 3, as some people still expect it to do. Or, of course, it could be a new chapter, taking place after Part II. Either way, a new film could have a lot of material to play with, including how the world came to be besieged by these alien predators with hyper-alert hearing. It could also veer off into a whole other dimension to explore other contingents living in absolute silence, exploring methods of survival and god knows what else someone would need to survive such a thing. As before, Blunt told Collider (opens in new tab) that Krasinski has plenty of ideas for both a sequel to the Abbott family and for a tangential film, explaining that Krasinski "wanted to see how people responded to this one (A Quiet Place 2) before he fully engaged his brain on the third one. But he has a couple of great ideas." In an interview with Empire, Krasinski teased all the potential, saying "Is it going to continue the Abbotts? Who knows!... No, I will tell you that it is... I'm really excited about the third instalment because it's going to do something that we haven't done before." Which is a lot of words to say not much. That said, he did give us something real to chew on, speaking of the end of Part II: "The ending of the last shot is, now that the world knows about [the signal that the creatures are vulnerable to], what will the world do with this answer, or with this weapon? Will they be responsible with it, or will they not be responsible with it?" (Image credit: Paramount) Of course, A Quiet Place 2 focused on the wonderful Regan Abbott (Millicent Simmonds) and her quest to find the source of a mysterious radio signal, which played 'Beyond the Sea' on a strange loop. If you haven't seen the film yet, please stop reading now because some spoilers will be revealed below. Instead, you can head over to our How to watch A Quiet Place 2 guide and scope out a place to watch it. Back to the plot for A Quiet Place 2. In the film, we have the ever-fearless Regan going in search of the signal, heading out to the island to try and determine its origin. Alas, the island is actually a safe haven for humans as the aliens cannot swim; the National Guard rounded up people in the early days of the apocalyptic invasion to safely stow them away from the monsters. Except a monster does eventually arrive, because of course it does. There is any number of places a new story could go, so we'll keep you updated as we get more info. Right now, it really is an open book.
