Tracing Letter A Worksheets Whereas most people generally think that communication is related to talking and listening, writing and reading are another set of skills that mustn't be underestimated. Kids like to imitate adults. When adults (their parents) talk, they want to imitate it. That's when they start mumbling and form words. When kids see their parents read and write, they want to do it too. They don't really understand the letters of the words - they simply imitate what they see. This is when emergent writing starts. Emergent writing is about how young (kids) learners start to write. Emergent writing is basically about the way these young learners start (writing). The process typically begins with scribbles. Over time, scribbles will lead to letters as these kids hone their skills in writing the letters. When they are able to learn the forms of the letters, they start turning those letters into words. Their communication skills will improve as they start linking written and spoken words. Adults, especially parents, are basically the instrumental part to help their kids to link writing to speaking and also reading - focusing at early years or young age. They can help by encouraging the scribbles - leading and guiding them to letters. As these young learners shift from scribbles to writing (poorly) and then writing well, they basically develop their writing skills. It's related to reading skills too as these learners know how to read from top to the bottom or from left to right. They also learn about punctuation - and how it affects their reading. So, why should kids start at the early age? It is an indicator about a kid's reading ability. From 0 age to middle school, kids are like sponges. Moreover, they may struggle with other areas, such as: Writing within a straight line Holding a pencil and controlling it Placing the letters on the page - and then moving to placing the words Making the letters (and also words) within the proper and correct size These are the most common issues related to early writing learning process. Parents or teachers need to reinforce patience to their kids. These issues are basically common and it's pretty normal that the kids would experience it. The adults need to be super patience when they are dealing with the kids. For expressing ideas, it will take place on the next stage. Once the kids have mastered the basic writing skills, then learning how to express ideas will be the next challenge. Teachers or parents can make use of the many available tools to manage this, such as graphic organizers to help them. Teaching how to express ideas would be another level in writing process. They simply copy the pattern to form a form - whether it is a letter, number, or shape. In alphabet tracing worksheets, they will see many forms of them. There are worksheets for numbers, for capital letters, or for small letters. Kids can trace those 'examples' so they know how to properly create a certain form of letter.
