Google maps my maps offline. Google maps my maps navigation. Google maps my maps tutorial. Google maps my maps android. Google maps my maps iphone. Google maps my maps delete. Google maps my maps login. Google maps my maps directions.

google maps is ideal for simply moving, but don't be fooled: the application is much more than a glorified garmin. maps have all kinds of powerful features and direct access to time that are not obvious, but are waiting to be discovered. so take your compass and get ready: it's time to explore some of the most useful options on the off-play route. We have all been guilty of looking down on our devices while driving, to look forward, next shift, maybe, or see how long it's on a trip. if you have an android phone, it's better than: google maps has a complete series of useful voice commands that will work every time you are actively browsing. say ", for example, "google "or "OK, google ... and then test the variations in these examples: "What way is this?" "What is my next turn?" "What is my eta?" "How is the traffic ahead?" "What's the matter of work?" "unforeseen tolls" "unforeseen roads" "find service stations" "save the restaurants" "What is the nearest hotel?" "Requiring navigation. You can also instruct your phone to make calls, send text messages, play music, or search for your next appointment, all without you leaving the road. open the maps on your iphone or android phone and touch the small blue point that represents your current location. that will open a hidden menu with some practical options, including the ability to save your current parking location. you can add in your own extra notes or photos or even set up a timer to remind you when it is time to move your car. all you need to remember where parked is in the mobile maps app. when you are ready to go back to your place, look for the parking notice stored on your phone orOpen maps and touch the "Laboking location" card at the bottom of the screen.3. Share your location, even when you moved to someone to find it, or maybe only where are you? Take a look at Simple system for real-time location exchange. To test it, open maps on your phone and tap the blue dot, just like on the previous tip, but this time, select "your location." You can set a final time for the location swap or choose to keep it active until you manually switch it off. Then, you can select any of your contacts to share with or get a private web link to paste wherever you want. You can also access the sharing feature while you are in the middle of a map navigation by swiping from the white bar at the bottom of the bottom of the bottom of the bottom of the screen and then selecting "Progress of the sharing journey." That will compare your location with whomever you choose until you reach your set destination. In one scenario, people who open the link will see an icon that shows their current position on A Map as you move, within the Maps application if they have one, or in a regular browser window if they don't. You will see an indicator at the bottom of the maps, letting you know that location swap is active, and you can always stop swaping by tapping that box. The Swipe-Up-While-Browser menu mentioned in the tip above has another GEM utility: an option to search along your current path.Activation will give you one-touch buttons to find gas stations, restaurants, grocery stores or cafes on your way from point A to point B. You can also write into your account Custom Search Term: if, say, you want to see every Starbucks or Taco Bell that is on your current route.5. Find out what's close to the search, a similar kind of search is available on maps even when you're not browsing. Whenever you want to find specific types of places near your current location or anywhere else, tap the search bar on the top of the mobile app and try the variations in these queries: "Restaurants near here" "Pharmacies near Figueroa and 1st Street" "Vegetarians near me" "Book stores near UCLA" "Gas stations near the airport" "Things to do near the Florida Theatre" Maps can act as guides practically anything, anywhere. You can also browse to see what is close to your current location by opening Maps on your phone, and then scroll and spin through the Explore tab at the bottom of the screen.6. Get a ticket to ride The next time you search for a location on your phone and then decide to acclaim a Uber or a Lyft to get there, save a few steps and order your trip from the right within the Maps app. After looking for a specific place and then touching the Instructions button, look for the icon with a person who waved his hand in the air as if he was attracting a taxi (located directly below the address bar, between the walking person icon and the biking-guy icon). That will show you current prices and waiting times for Lyft and Uber, just then and there, and allow you to go directly to the process of ordination of walk within each application. Before you go out to the store, your favorite deli, or even the DMV, let Maps show you how long to wait you will face when you arrive. Look for the place in the Maps app on your phone — or find and shout within your current map view — then tap the name of the business on the white bar at the bottom of the screen and get off until you see the section labeled "Forms". There, you will find a graph of the typical crowds on your current day and time and often also a live report of how busy it is at the same time. You can look forward to find average data on crowd congestion for any other day and time as well. See exactly how busy businesses are or are likely to be in the future with Maps.' "Popular Time" tool. Name your favorite places If you are looking up or browsing the same places repeatedly, make your life a little easier by giving your favorite points names.Memorable For example, you can call the office of your doctor "Doctor's Office" or "This is much easy to remember and say in a voice command that an official monitor based on maps as "This the Hospital: Puglia Joseph MD. " of you can call your friend the building impossible to find "apartment for a simple continuous reference.The trick is to access the Maps labeling system, which is easy to lose. First, look for the place you want in the application maps of your phone (or shut it up and tap it in the current map view) and then tap the name of the company or the building in the white bar At the bottom of the screen. Next, it touches the "three-point menu in the upper right corner of the screen and select "AA ± adir tag »in the menu that appears. It writes the label you want and guide it. From that moment, you will see your personalized tag instead of the formal name of the location everywhere in Maps, and you can navigate to the place simply telling Maps (or Google Assistant, on Android) to navigate Until the name you have used.9. Save your special places to named places, mobile maps applications allow you to create collections of places to navigate or share in the future. Simply touch the name of any location within the same bottom bar of the screen we have been using, then look for the option tagged "Save." Touch that and you can save the place in a default list, as «Favorites», or create your own personalized list where you will reside. You can choose to make any list privacy «for your own personal view» or you can choose to be accessible through a special shared link that you send. It may even be available publicly so that anyone will find it online.10. Explore EyesTreet View is one of the most great characteristics of Maps, but probably you would never realize that it exists if you did not know where to look. First, in your phone, look in maps anywhere, like times Square, for example. (You can also touch and the finger anywhere on a map to select a specific reference point). Then, touch the image of the location that appears in the lower left corner of your screen.Ahora, for the really clean part, touch the brown blade in the upper right corner of the app's . Hold the phone and move it, and the view will change to match the actual address you face at any given time. It will be as if you were standing inside the map and looking around.11. Step back in timeEnter the flow capacitor. Doc: We are about to make a serious journey in time. Google Maps has an unfamiliar feature that allows you to see Street View for any area, as it existed at several points in the past. This function only works from the desktop site, so open Maps on your computer and choose a place. You see that yellow little guy in the lower right corner, known to his friends as Pegman? Drag it with the mouse and drop it wherever you want to go. Then look for the watch icon in the gray box on the top left of the screen.Click this and you can drag a slider back through time to see 360 degrees views of previous years. The function is not available for all possible places, but it is quite widespread and many locations have a full decade of data. Views of the past with the history function of Google Maps Street View.12. Transport a map directly to your phone or carSpeaking of maps on the web, the next time you search for addresses on your desktop, save a step and transfer them directly to your vehicle or mobile device.All you need to do is click on a discreet option that appears every time you search for a place or pulls up directions. It will be in the box on the left side of the screen, either as an icon below the name or address of the place, if you are looking at a regular map, or as a plain text link right above the route options, if you have already selected indications. (If you have clicked through a specific route, it will be an unlabeled icon immediately to the right of the estimate of travel time. And yes, there is irony in the fact that you practically need a map to find this feature.) Click on any version that appears, and you will see a list of devices devices are connected to your Google account. Android devices should appear automatically, while iPhones will require you to first install and log in to the Maps app, and then enable notifications in the app settings. For a car, you will have to manually add your vehicle to the Google Send to Car site, provided you have a compatible brand and model. Whatever way you go, Maps information will appear as a notification on your panel or device seconds after you send it from your desktop.13. Check Time Specific Traffic EstimatesYou can find out how long a drive can take at a given time with Maps Smart Traffic Estimate Tool. Just look for a location in the desktop version of Maps, then click the "Address" button and place the starting point you want. At the bottom of the same box where he wrote the address, you will see a line that says "Get out now." Click the down arrow next to it, then select «Depart at» or «Load» to see the probable traffic conditions and the estimated total travel for any specific day and time. The Maps traffic estimation tool will help you determine how long you need to leave the road, even if you are not on the road immediately.14. Get Personalized Daily Displacement NotificationsWhen it comes to your standard daily travel, let Maps help you avoid headaches by giving you proactive alerts about travel times and any heavy traffic or delays on your route. To configure your custom switching notifications, tap the three-line menu icon in the top left corner of the mobile app, select "Configuration" and then select "Commutation" on iOS or "Configuration of switching" on Android.This will open a screen where you can use the display. (or confirm) your home and work address and give Mapas some information about how and when you usually make your trip. Fill out all the fields, and make sure to activate the option "Get switch notifications" to the bottom of the screen, just sit back, relax, and know how to know The maps will have their back from there to leave. Add additional destinations to your addressTweeler Each Trek is a two stop adventure. And while it is not exactly front and central, the maps have a function that allows you to add several stops in any navigation. Since your phone, start by looking for your first destination. Touch the "Addresses" button, then write your starting point. Do you see the small icon of the three-point menu to the right of that same field? Take it, then select "Add stop" of the menu that appears. Then, you will get a third field in which you can enter another destination, and when filling, the option of a fourth destination will appear. You can even drag and drop the destinations to reorder them as necessary. The characteristic is little more prominent when using maps on a computer: after shooting instructions to a specific destination, you will see a small sign plus with the text "Add destination", next to her. You can touch it to add as many additional stops as necessary on your trip, and you can drag and drop the destinations to change your order.16. Get parking information before you are more annoying than reaching some place at the last second and then struggling to find out where parking. Maps can help. Before arriving at the road, look for your destination in Google Maps application on your phone. On Android, touch the Addresses button at the bottom of the screen, then touch "Points and Parking" and look for the option "Parking Parking". In iOS, touch the steps button at the bottom of the screen, and then look for the "Parking Parking" link to the center of the screen. Keep in mind that the parking function is available only in some US cities. UU and Google does not specify what. Then, if you do not see the "Parking Park" option, it could not be in your area from Measure the distance between multiple knit pants to map your morning jog, or maybe I just know exactly how far you have to travel on a particular trip? Maps canMeasure the distance between two or more points, until the second decimal. On your phone, touch and keep your finger at your starting point. That will make a red pin appear along with a white bar that shows more information about the location. Dislocate up on the bar on iOS or tap the bar on Android and then select the "Critical Distance" option. After that, use the Blue Plus finger and icon to find and select the second point. Repeat as many times as necessary to measure your full function. Paps' distance measurement function. The distance measurement function makes it easy to determine the precise distance between any number of points. On a computer, right-click on your start point and select "Mid away from the menu that appears, then click on every back point of your route to get measurements.18. Register in your booking that you use Gmail and / or Google Calendar, you can find information about the upcoming reservations, as mentioned in the confirmation emails on your investments or event invitations on your agenda, right within the maps. Touch the three-line menu icon in the top left corner of the mobile app, select "Your place", and then search the tab "reservations" at the top of the screen. Any plan You will automatically appear there, and you can access them to obtain detailed information about your location along with the option to start navigation.19. Save time with Advanced Gesturesbeyond The classic Pinch-Zoom, Maps has plenty of other useful gestures to help you get the app on your mobile device. Try these advanced manoeuvres: to approach or get away from a map with one hand, double touch and then, without lifting your finger, slide up or down on the screen. Turn a map around to change your orientation by placing yourindex and thumb on the screen and then twisted to the left or to the right. Change your perspective by placing two fingers on a map and sliding them both up on the screen. That will take you to a "FLICeerover" view of whatever You are looking, complete with three-dimensional buildings in many places. Do you want to save the next time that is ready to navigate? After looking for a location, press and hold the blue button "addresses" at the bottom of the screen. That will take you directly to the navigation mode, using the best Google divination for the route and the transport method that is likely to use it. 20. Exit Google's services with most networks, maps use their buses and actions in the application to customize future suggestions. But if you are going to somewhere, you do not want to be stored and associated with your account, the maps have a new useful function that allows you to go from incognito and prevent you from saving any of your activities. To access it, simply access your profile icon. In the upper right corner of the Maps interface in your phone, then touch "Add a", "rotation in the Incognito mode" of the menu that appears. The application will be reloaded, and you will see a gray bar at the top of the screen that will inform you that the incologist mode is located along with a dark incologist mode icon instead of your usual profile image. When you are ready to return to the network, touch the Incologist Mode icon and select "Deactivate the Incognito Mode". And do not worry: the safe of your secret with me. For more follow-up, Google's knowledge, check out my Android intelligence bulletin. [Editor's note: this story was updated and expanded in January 2020.] 2020]
