With the official announcement of Marshmallow update plans for HTC and Sony devices, as well as one for T-Mobile, as it is very fashionable at the moment, we now know which devices will receive the Marshmallow update that will not reach the big companies. Those who make the leap will have to rely on a custom ROM based on Android 6.0 AOSP, which Google spent the day publicly open-sourcing. AOSP ROM will be a big hit with many Android phones and tablets because it was a marshmallow show for two or three months. So let's see where the most popular AOSP Roma in the world is currently Cyanogenmod. CM13 The current status of the CyanogenMod team said something about the status of the Marshmallow upgrade, 6.0 portability and planned release dates. Of course, we should wait for someone on the team to talk to you about the plans for Android 6.0. So we don't have a CM13 release date to share with you, but it's easy to say that it's right next to it. The build has to start today 2015 October 6th, I hope it happens soon so you can expect the unofficial CM build to be released within a month of late October or early November. Although the official versions are popular sets like Nexus 4 and Nexus 5, they should not be much, say, in the first half of November. We believe the work has already started, but it will take some time to get all their features fully compatible with Android 6.0, and it's worth it. CM13 release date We usually start implementing at least one unofficial CM or other version of AOSP-based versions one or two weeks after the release of the latest Android update for AOSP. So if you ask us about the release date of CM13, we would say on the official versions of CM13 like Nexus 4, Nexus 5 and Nexus 6. So we could start seeing CM13 for others more than a month. Developers for devices such as OnePlus One and OnePlus 2, Nexus Tablet and Cyanogen OS based devices. The oldest Samsung devices such as the Galaxy S4 (Qualcomm processor) and HTC devices such as the M8 and M7 should taste CM13 in two months. Downloading CM13. Although the official release takes time, for example more than a month for popular Nexus devices and about two months for other devices, there should be unofficial releases for the big no. objects per month or more. So whenWith Marshmallow updates officially rolling out to HTC and Sony devices, and T-Mobile's plan being up-to-date, we now have a good idea of which device will get the Marshmallow update and stay with the big companies. Those who missed out will have to rely on a custom ROM based on Aosp Android 6.0 that Google released via open source the other day. AOSP firmware will become a hit for many Android phones and tablets as it will be a marshmallow show in the next two to three months. Let's summarize where the most popular Cyanogenmod firmware is in the world. The current status of the CM13 CyanogenMod team did not say anything about the development status of the Marshmallow update, porting options to 6.0, and the expected release date. Of course, we'll have to wait for someone from the team to say something about Android 6.0. So we don't have a CM13 release date to tell you, but it's easy to say from experience that it's not far off. Development has not yet started as of today, October 6, 2015. However, expect this to happen in the near future, so you can expect the unofficial MK assembly to be released within a month, by late October or early November. Although the official gathering of popular devices like the Nexus 4 and Nexus 5 shouldn't be too long, say from the first half of November. We are sure that the internal work has already started, but because it adapts all their functions to ensure full compatibility with the Android 6.0 code, the expectations are worth it. The release date of CM13 will usually be visible in at least the unofficial CM or any other AOSP-based AOSP that will appear a week or two after Google releases the latest Android AOSP. So if you ask us about the release date of CM13, we will answer that you have to wait more than a month for the official CM13 package for popular devices like Nexus 4 and Nexus 6 and Nexus 5. So we could see CM13 for other developers friendly devices like OnePlus One and OnePlus 2, tablets and Nexus devices based on Cyanogen. Old Samsung devices like Galaxy S4 (Qualcomm One Processor) and HTC devices like one M8 and one M7 should try CM13 for two months. Charge CM13, while the official kits take time, like over a month for the popular Nexus device and about two months for other devices, they should be unofficial kits for a lot of money. Equipment per month. Then whenI would like to check the wetsuit, it would be possible for the next 30-40 days. This is our premise and there is no official CM team name. By the way, the official versions of CM13 will be available here. The expected CM13 device Almost all Qualcomm processors with an Android device are well CM13. The same applies to most devices supported by MediaTek. But the Exynos de Samsung processor is a completely different scenario. HTC we are reviewing the HTC One M7, M8, M9 and Desire series, as well as the butterflies and other sets of CM13 ROM devices respectively. Be readily available on most of your devices, unless that particular device has already embarrassed developers for one reason or another. Motorola, All Moto X, Moto G, Moto E, Moto X Play and Style Generations, Droid Turbo and Moxx Motorcycles etc. Officially released in two months or CM13. For the Sony Company, it's very, very developer friendly. Expect CM13 to be available for Sony devices such as Xperia Z, Z1, Z2, Z3, Z4 and Z5 without any issues. In addition, the most popular sets up to the Sony Medium -Light level should have no problems completing the Marshmallow update with the CM13 Custom ROM. Now we focus on big, Samsung to focus on great attention. You have to divide the wide range of Android devices from Samsung in two ways: one is powered by the Samsung Exynos processor and the other is powered by the Qualcomm processor. Samsung and Exynos are not suitable for developers. CM13 cannot be expected to arrive near the Galaxy, S6 Edge, S6 Edge Plus, Note 5, etc. at any time. In addition, kits such as the Galaxy S4 and S5, delivered by the Exynos processor, can always expect CM13. While many Samsung devices also power the Qualcomm processor, including the Galaxy S3, S4 and S5, and everyone should get the CM13 within two months. That's before the end of November. If you take LG you will see CM13 on some instead of others. For popular lineups like the LG G3 and LG G2, their CM13 ROM should be earlier than late, but you can't be sure about other LG devices, although odds are better than Samsung's Exynos devices. Other OEMs such as Xiaomi, Huawei, Xolo, Micromax etc. CM13 would give a path to popular kits of each OEM, but it may take some time depending on how development has been so far and the number of developers who still have this is the device for the creator of CM13. ON. But you can hope if you have TWRPThis equipment. CM13 No, you should have a TWRP recovery or any other personalized catering, such as installed or available for your equipment or CWM or Philz available. It is not possible to sparkle CM13 or other ROMs without personal renewal. It may be necessary to unlock the start-up charger of your device, which is easy if your device comes from Verizon, AT&T and Sprint in the United States, you can then install Twrp using the Fastboot control. Although Samsung does not require the start of the start -up charger, you just have to flash Twrp from the download mode. In both cases, the guarantee of your device is valid. The installation CM13 gives you a return, which is good because of the advantages you get. And anyway, your device may have more than a year if it does not officially receive the update of the marshmallow, so you look CM13 and other Roma AOSP. CM13 Wait ... Well, yes, that's all we can do at this stage. However, keep your device selected using TWRP recovery because you may need it. Who knows, the day after the assembly of CM13 could go crazy. Be ready, right? Let us know which AOSP can't wait to try except CM13? For you, all CyanogenMod fans outside, which will make you happy.
