Telkom has received a new number range, according to an email sent to business partners which has been seen by MyBroadband. The email stated that the range was allocated to Telkom this month and is situated within the 068 number group. The new range spans 068 numbers from 000 0000 to 599 9999. This results in a total of six million new numbers available to Telkom Mobile. Following the allocation of this 068 number range, Telkom now has access to the 061, 065, 067, 068, and 081 number ranges. To learn more about which ranges are operated by which mobile networks and what they mean, read this breakdown of number range allocations. Now read: Telkom plans to kill ADSL Skip to content With the liberalization of the South African communications market, new operators have been licensed by ICASA. This include Neotel and Under Serviced Area Licencees (USAL's) who have been licensed to provide telecommunications services in areas with a low teledensity as well as a host of newly licensed electronic communications network service (ECNS) and electronic communications service (ECS) providers. Different Operators Different number ranges These operators have all been allocated different number ranges by ICASA and will interconnect with Telkom for calls originating on Telkom's network and terminating on another network (off-net calls). These allocated number ranges includes non-geographic number ranges like 087 xxx xxxx as well as geographic number ranges like 021 300 xxxx which would normally be perceived as a Telkom telephone number in Cape Town, but in fact has been allocated to another licensed operator. The impact on Telkom customers Customers will have difficulty in recognizing in advance when calling a telephone number if that call is an on-net (terminating on Telkom's network) or off-net (terminating on another licensed operator's network) call. This will have cost implications for the customer since these off-net calls will have different rates and are more expensive than a Telkom-to-Telkom call (on-net). Off-net calls are also excluded from Telkom product offerings like CLOSER and SupremeCall. How can I determine off-net calls on the Telkom invoice? All off-net calls will be grouped together on the monthly Telkom invoice. Off-net calls will appear under a separate heading " Other operators". The date, time, duration, number dialled etc. will be displayed. Below is an example of how calls to other operators will be displayed on the detailed pages of the Telkom invoice. "How do I identify the "Other operator"? You can use the Telkom pricelist to identify some of the Other Operators You will be able to identify the name of the Other Operator as well as the starting digits of their allocated number range for example: CMC (087 825) Help on identifying off-net calls Calls other than those originating and terminating on Telkom's network are known as Off-net calls meaning that they are destined for a telephone number that will terminate on another telecommunications network operator. Off-net calls are excluded from Telkom product offerings like SupremeCall - unless specified as inclusive like for example International calls. Determine if a telephone number is an Off-net number. The Ultimate Guide to South Africa's Phone Number Codes. Let's be real—South Africans love getting spam calls. You know, the ones where someone offers you "a life-changing investment opportunity" or claims you've won a competition you didn't enter. Just kidding—no one loves that. But here's the thing: knowing how to handle those mysterious numbers (and spotting the scams) starts with understanding South Africa's phone number system. Here is our ultimate South African Phone Number Codes Guide. South Africa's telephone numbering system is an essential part of staying connected in the country. Whether you're receiving a call from an unknown number or setting up a business line, understanding these codes can make all the difference. This guide dives deep into South Africa's phone system, helping you pinpoint regions and navigate the telecom network with ease. South Africa follows the International Telecommunication Union's (ITU) E.164 standard. The country's international dialing code is +27, replacing the leading '0' when dialing from abroad. Numbers are categorised as: Landline Numbers: Begin with a 0 followed by a two-digit area code. Mobile Numbers: Start with specific prefixes such as 06, 07, or 08. VoIP Numbers: Typically start with the 087 prefix. Below, we'll explore the area codes for each province and region. 011: Johannesburg and surrounding areas 012: Pretoria and nearby regions Gauteng is the economic powerhouse of South Africa, making these codes some of the most frequently used. Ah, the 021 area code — the pride of Cape Town and its surrounds. Whether you're a local, a visitor, or someone who accidentally Googled this while trying to dial a number, you've landed in the right place. Let's break down everything you need to know about this iconic South African area code, with a touch of humour to keep things spicy. (You're welcome.) The 021 area code proudly serves the beautiful Mother City — Cape Town. From the buzzing streets of the CBD to the laid-back suburbs of the Southern Peninsula, if you're dialing 021, you're probably reaching someone with a stellar view of Table Mountain. Some of the key areas include: City Bowl: Where the magic happens and where people insist their coffee order is an art form. Southern Suburbs: Think leafy streets, family vibes, and at least three Labradors per household. Northern Suburbs: Home to braai masters and people who'll fight you over the pronunciation of "Durbanville." Cape Flats: Full of resilience, culture, and stories that make Cape Town the diverse gem it is. Atlantic Seaboard: For those who Instagram their lives and spend more on rent than you'd think humanly possible. Before cellphones took over and WhatsApp became life, landlines were king. The 021 area code was introduced to connect the good people of Cape Town and nearby regions to the rest of South Africa. Back then, answering the phone wasn't followed by a wave of panic about whether it was a scam call or your long-lost cousin asking for money. Fun fact: 021 is one of the OG area codes in South Africa. It's like the Table Mountain of area codes — old, reliable, and standing tall through the years. 1. Is 021 a landline or mobile code?It's a landline code, but let's be real: who even has a landline anymore? If you're calling 021, it's probably a business, your parents, or that one friend who refuses to move into the 21st century. 2. Can I still use 021 when dialing internationally?Absolutely! If you're overseas and craving some Cape Town vibes, just dial +27 (South Africa's country code) and then 21, followed by the number. Easy, right? Now you just need to remember the time difference. 3. Why do so many scam calls come from 021 numbers?Look, we don't know why either. Maybe scammers think Cape Town sounds friendly. Just remember: if it's too good to be true, it probably is. Unless it's a free wine tour, then maybe take your chances. Instant street cred: A 021 area code means you're either living the Cape Town dream or your business is. Location, location, location: When someone sees 021 on their caller ID, they're picturing beaches, wine farms, and mountains. Even if you're calling from a nondescript office, you're basking in the Mother City's glory. Conversation starter: "Oh, you're from Cape Town? I've been meaning to visit!" And just like that, you're interesting. Save the good ones: If your favourite coffee shop or wine estate calls, don't lose that number. Priorities. Beware of spam: Not every 021 number has good intentions. If someone offers you an "investment opportunity" that sounds like a pyramid scheme, it probably is. Dial smartly: When calling within South Africa, just use 021 without the +27. Simple as that. The 021 area code isn't just a string of numbers — it's a badge of honour, a gateway to one of the most beautiful cities in the world, and a reminder of how far we've come from the days of rotary phones. Whether you're calling, being called, or just Googling to satisfy your curiosity, 021 has got your back. And hey, if this post inspired you to visit Cape Town, let me leave you with this: the sunsets are better in real life. Just don't forget to dial 021 if you're booking that guesthouse by the beach. Stay lekker, Cape Town lovers! 031: Durban and nearby areas 032: North Coast 033: Pietermaritzburg and Midlands 034: Northern KZN 041: Port Elizabeth (Gqeberha) 043: East London 045: Queenstown and nearby areas 051: Bloemfontein and surrounding regions 013: Nelspruit (Mbombela) and surrounding regions 015: Polokwane and surrounding regions 018: Mafikeng and nearby towns 053: Kimberley and surrounding regions South African mobile numbers are identified by their prefixes: 060 – 068: Various mobile providers (e.g., Telkom, MTN, Vodacom, Cell C) 071 – 079: MTN, Vodacom, and others 081 – 084: Cell C, Vodacom, and others 087: Ahhhh the all and wonderful 087 area code assigned to VoIP services, these numbers are not tied to a geographic location, making them ideal for businesses. The 087 area code in South Africa is a non-geographic telephone prefix. Unlike classic codes like 021 for Cape Town or 011 for Jozi, 087 doesn't care where you are. Call it the "wherever-you-are" code. It's particularly handy for businesses that want to look all fancy and nationwide without actually being everywhere at once. The magic behind 087 numbers? It's called Voice over Internet Protocol (VoIP). This tech turns your phone calls into internet wizardry, letting your words travel through fiber lines instead of old-school copper wires. Better sound, lower costs, and loads of tech tricks make VoIP the way to go. Just pray your Wi-Fi doesn't ghost you. Forget the old geographic ties – 087 numbers are the free spirits of the telecom world. Businesses using 087 can take calls from anywhere, whether the customer's in Sandton or Soshanguve. Easy-peasy, no matter where the map drops you. Calling 087 numbers? Lekker, because it's usually as cheap as a local call – perfect for saving those precious rands. And for businesses, VoIP's the real MVP, cutting costs like a pro. But don't get caught out, hey – it's cheaper until your provider pulls a fast one. (Those T&Cs can be sneakier than a traffic camera!) At Voys, we don't roll like that. What you see is what you pay – no hidden costs, no surprises. Straight-up, just how it should be! Your average 087 number isn't basic. It's got: Call Forwarding: Route your calls to your cell, laptop, or even your toaster if it's smart enough. Call Recording: Catch every word – perfect for replaying those "but you said" moments. Voicemail with Style: No missed messages, no worries. Analytics: Get stats on how much your customers love or avoid you. 087 numbers scream "We're legit!" and give businesses a polished, professional look. Customers are more likely to trust a company with an 087 number over, say, one with your cousin's cellphone number. Scaling up? No problem. 087 numbers grow with your business. Whether you're moving from a garage in Durban to a high-rise in Sandton, your number stays the same. 087 numbers are easy to remember and work nationwide. No more "I'll give you our Durban and Joburg numbers" confusion. One number fits all. Here's how 087 flexes on other area codes. Geographic codes like 031 (Durban) or 012 (Pretoria) tie you down to one spot. But 087? It's the nomad of numbers. Whether you're chilling in Bloem or doing business in PE, 087 has your back. With South Africa's internet game leveling up, the 087 area code is only going to get bigger. Faster connections and cheaper data will make VoIP the norm, and 087 numbers will keep on shining. Businesses that hop on the 087 train now are setting themselves up for long-term wins. 080: Toll-free numbers 086: Shared-cost service numbers 090: Premium-rate services Receiving a call from an unfamiliar number can be concerning. Here are some practical tips to stay safe and informed: Try a Reverse Lookup Service: Various platforms can help you identify unknown numbers. For example, tools like Truecaller, Searqle, or Zlookup provide insights about a caller's identity, including potential flags for spam or fraud. Assess the Number's Prefix: Review the area codes or mobile prefixes to identify the call's origin. This guide is a handy reference. Look for Signs of Spoofing: Fraudulent calls may imitate local or known numbers. Be skeptical of unexpected requests for money or sensitive information. Monitor Patterns: Repeated calls from similar numbers, strange sequences, or aggressive messages can signal scam activity. Block such numbers immediately. Utilise Caller ID Apps: Applications like Truecaller or WhoseNumber can provide real-time alerts about potential scams and help identify unfamiliar numbers quickly. Research Online: Search the number online to see if others have reported it as spam. Many sites allow users to comment on suspicious numbers. If unknown numbers keep calling you, a reverse phone lookup service can help uncover who's behind them. These tools reveal the caller's identity, location, and intent. Explore the best reverse phone lookup options in our in-depth guide and learn how to make the most of these services. Find everything you need to know here. Reverse Phone Lookup. Enhancing your communication strategy begins with understanding South Africa's phone codes—but that's just the start. MTN Numbers mean you dial to do things like check your airtime balance, listen to your voicemail messages or buy airtime. Find below are the list of MTN Numbers In South Africa 0603 – 0605. MTN. 0610 – 0613. Cell C. 0630 – 0635. MTN. 0638 – 0640. MTN. 0641 – 0645. Cell C. Cell C. Get ready to the idea dialling mobile numbers with prefixes like "060" and "061". Vodacom, meanwhile, has been given access to "0606", "0607", "0608" and "0609" and MTN is now using "0603", "0604" and "0605" in addition to the more familiar prefixes like "083" and "073". Use your favourite search engine Through reverse phone lookup, you can use Google to track a phone number. Go to the Google search page and type the phone number. Click the search button, and your search result of the number will be displayed. Use Google and Google maps Using Google maps, you can go further and trace the phone number's location. How to find someone's location by cell phone number? Open the Google browser and click on the search option. Type the phone number you are tracking and press enter. To check your phone number with Mtn, you can dial *123# and follow the on screen prompt. Select option 1 and send to select My Tools Option. Then select option 5 in My Tools to request My Number. South Africa's telephone numbers are made up of 11 numbers split into groups of 3. So if you're going to make a call to South Africa using a mobile phone, you should dial country code+area code+7-digit number. Some of the common area codes in South Africa include Bloemfontein (51), Cape Town (21) and Durban (31). How to check your number on MTN numbers. If you were worried about how to check my MTN number, there is a short code for that. You can do so by dialling 123888#. Go into Settings. Tap About Phone. Tap Status. Tap SIM Card Status. Scroll down to ICCID. This is your SIM card number. Telkom Telkom now has access to the 061, 065, 067, 068 and 081 number ranges as a result of the allocation of this 068 number range. In South Africa, phone numbers contain important information like the location of the call's origin or the mobile network to which the number is enrolled. According to ICASA's 2016 National Numbering Plan Regulations, telecom license holders in South Africa are given telecom numbers. Telecoms numbers in South Africa have 10 digits, with the exception of short codes and machine-related numbers, such as those used in point-of-sale (POS) systems. Geographic and non-geographic categories are used to categorize these figures. See Also Are Alison Courses Recognised in South AfricaThe table below shows which mobile number ranges are allocated to each mobile network operator. Mobile numbers – Non-geographic Starting number Location 06 numbers 0603 – 0605 MTN 0606 – 0609 Vodacom 0610 – 0613 Cell C 0614 Telkom 0615 – 0619 Cell C 063 – 0635 MTN 0636 – 0637 Vodacom 0640 MTN 0641- 0645 Cell C 0646 – 0649 Vodacom 0650 – 0653 Cell C 0654 Lycamobile (Cell C roaming) 0655 – 0657 MTN 0658 – 0659 Telkom 0660 – 0665 Vodacom 0670 – 0672 Telkom 0673 – 0675 Vodacom 0676 – 0679 Telkom 0680 – 0685 Telkom 069 MTN See Also How Long to Get a Passport in South AfricaWhat character begins a South African cellphone number? You must provide the area code or mobile network code at the start of the number when calling within South Africa. As a result, the number will begin with a 0 rather than +27. Read rhapsody of realities daily devotional Rhapsody of Realities is a life guide that brings you a fresh perspective from God's Word every day. It features the day's topic, a theme scripture, the day's message, the daily confession and the Bible reading plan segment. It is God's Love Letter to You! Most South Africans know that 082 is a Vodacom number and 083 is MTN, but with the multitude of new number codes it can be confusing to know which network you are dialling. Before the advent of mobile phones, it was easy to see who you were calling: 01 – The old Transvaal province (now Gauteng, Mpumalanga, Limpopo, and part of the North West) 02 – The Western Cape and parts of the Northern Cape 03 – KwaZulu-Natal 04 – The Eastern Cape and some eastern parts of the Western Cape 05 – The Free State and parts of the Northern Cape When mobile phones were introduced in South Africa, Vodacom received the 082 number range while MTN received 083. Cell C received 084 when it launched in 2001. As the mobile operators grew, and new fixed-line and VoIP operators launched, there was a need to hand out more number ranges. It soon became challenging to know which number ranges represented which operators. The table below details which number ranges are linked to which operators. Number range Area or Operator 00 00 International access code 01 01 Gauteng, Mpumalanga, Limpopo, and part of the North West 02 02 The Western Cape and parts of the Northern Cape 03 03 KwaZulu-Natal 04 04 The Eastern Cape and some eastern parts of the Western Cape 05 05 The Free State and parts of the Northern Cape 06 0603 – 0605 MTN 0606 – 0609 Vodacom 0610 – 0613 Cell C 0614 Telkom Mobile 0615 Cell C 0618 – 0624 Cell C 062 Vodacom 063 MTN 07 0710 MTN 0711 – 0716 Vodacom 0717 – 0719 MTN 072 Vodacom 073 MTN 074 Cell C 0741 Virgin Mobile 076 Vodacom 078 MTN 079 Vodacom 08 080 Toll-free, called party pays 0810 MTN 0811 – 0815 Telkom Mobile 0816 WBS Mobile (iBurst) 0817 Telkom Mobile 0818 Vodacom 082 Vodacom 083 MTN 084 Cell C 085 USAL licence holders 086 Sharecall, MaxiCall, and premium-rate services 0860 Sharecall land line callers pay local call, called party pays long distance if applicable 0861 MaxiCall caller always pay long distance for call even if routed to local call 0862 – 9 Premium rate caller pays increasing rate linked to last digit 08622 Competition lines 086294 Competition lines 08671 – 08674 Information services 087 Value-added services (like VoIP) 088 Pagers and Telkom CallAnswer voicemail 089 Maxinet, for polls and radio call-in services 09 09 Old International access code no longer in use More on telecoms Phone sex services to get new number range in South Africa New Telkom Mobile, 8ta number range
