On Wednesday, a jury in New York convicted ex-Central Intelligence Agency engineer Joshua Schulte on 11n charges he faced (as first reported by @InnerCityPress) as a result of the single largest leak in agency history. Dubbed Vault 7, the files and information shared by WikiLeaks in 2017 exposed a trove of tactics and exploits the CIA used to hack its targets smartphones, iPhones and android phones, and even Samsung Smart TVs. CIA spokesperson Tammie Thorp said in a statement given to the Verge, "Today's verdict affirms the CIA's commitment to the security of the nation's cyber capabilities, and is critical to our advantage against adversaries abroad. As set forth in the trial, unauthorized disclosures not only jeopardize US personnel and operations, but also equip our adversaries with tools and information to do us harm." Schulte, the subject of a lengthy profile in the New Yorker that described him as abrasive and then went into far worse details, was arrested in 2018, initially charged with possession of child pornography, and has been in jail ever since. The article details Operations Support Branch (OSB), where Schulte worked and reportedly built hacking tools by quickly turning prototypes into actual exploits that could monitor or steal information from the targeted persons devices. It reports that investigators obtained evidence against Schulte through his own lapses in personal security, like storing passwords on his phone that could be used to access his encrypted storage. It even goes into the trouble investigators had obtaining the Vault 7 documents they remained classified despite being leaked and publicly available on the internet, leading FBI officials to download the cache over Wi-Fi at a Starbucks to a freshly purchased laptop that immediately became officially classified, stored in a supervisors office, and only accessible with Top Secret clearance.Additional charges accusing him directly of stealing classified national defense information and sending it to WikiLeaks were filed later. In 2020, the governments first attempt at prosecuting Schulte ended in a mistrial as a jury convicted him on contempt of court charges as well as lying to FBI investigators but couldnt agree on the charges. That spurred the second trial that just ended, where Schulte opted to represent himself. The charges he was convicted on are all specifically related to gathering, stealing, and transmitting classified information and obstruction of justice for lying to investigators about it. He has not yet been sentenced, pending the resolution of the other charges he still faces for possessing and transporting child pornography.The Associated Press reports prosecutors argued that after feeling ignored and unrespected, complaints about the work environment, Schulte took to stealing and leaking the same exploits he'd been paid to create. In his defense, Schulte argued unsuccessfully that he was being used as a scapegoat for the governments failure to protect dangerous hacking tools, there is some evidence to support that argument, as The Washington Post reported in 2020 that an internal investigation by the CIA WikiLeaks Task Force found security in the unit was woefully lax with users sharing admin-level passwords and a lack of control over access to historical data or the use of removable USB thumb drives, and this was years after the Snowden leaks. Schulte claimed there was no reasonable motive established and that hundreds of people had access to the information who could've been behind the leaks.In a statement released after the verdict, US Attorney for the Southern District of New York Damian Williams said, When Schulte began to harbor resentment toward the CIA, he covertly collected those tools and provided them to WikiLeaks, making some of our most critical intelligence tools known to the public and therefore, our adversaries. His statement ended by saying, Schulte has been convicted for one of the most brazen and damaging acts of espionage in American history.See More: A man convicted of carrying out one of the most damaging data breaches in the CIA's history the public disclosure of secret hacking tools was sentenced to 40 years in federal prison Thursday, prosecutors said.Former CIA officer Joshua Adam Schulte, 35, was convicted of the so-called Vault 7 leak, and also of possessing child sexual abuse images, in two trials in 2022 and 2023.Damian Williams, U.S. Attorney for the Southern District of New York in Manhattan, said Thursday that Schulte betrayed his country."He caused untold damage to our national security in his quest for revenge against the CIA for its response to Schultes security breaches while employed there," Williams said in a statement after the sentence was imposed.Prosecutors had asked for a life sentence.Schulte, who left the CIA in 2016, stands convicted of some of the most heinous, brazen violations of the Espionage Act in American history, prosecutors said in theirsentencing memoto the judge, adding that he stole an arsenal of extremely sensitive intelligence-gathering cyber-tools from the CIA and handed it to WikiLeaks, which in turn publicized it to American adversaries in 2017.The defense asked for nine years, saying that Schulte has been subjected to continuous torture during his six-year confinement since his arrest, and calling him a bright, kind young man whose crimes represent aberrant behavior in an otherwise law-abiding life.Schultes attorney, Cesar de Castro, said they hoped for a lighter sentence but were relieved the 40-year sentence was not longer.We are very disappointed that Mr. Schulte received 40 years imprisonment, however, relieved that he did not receive life imprisonment as strongly urged by the government, he said. Joshua Adam Schultevia LinkedInIn alletteto the court, Deputy CIA Director David Cohen called the leak one of the largest unauthorized disclosures of classified information in the history of the United States and said it caused exceptionally grave harm to U.S. national security.He said the leak placed directly at risk CIA personnel, programs, and assets.Evidence at the trial showed Schulte worked for an elite CIA hacking unit, became disgruntled at work and may have leaked the material in a spiteful attempt to lash back at his colleagues.After being caught, prosecutors say, Schulte declared what he called my information war, and attempted to disclose even more classified information from jail in flagrant defiance of numerous warnings and a court order.Before and after his arrest, prosecutors say, Schulte fed an abhorrent personal fiction through his collection and viewing of an enormous trove of child sexual abuse materials.Approximately 3,400 images and videos were found of what the U.S. attorney's office described as "disturbing and horrific" sex abuse images of children. They were among other images hidden under layers of encryption on a personal computer, the U.S. attorney's office said.After Schulte's prison term, he will be on supervised release for life, the prosecutor's office said.Ken DilanianPhil HelselMay 7, 2017 7:52 AMWikiLeaks' latest batch of Vault 7 documents focusses on the CIA's anti-forensics toolsCIA logo being cleaned Getty Images / BRENDAN SMIALOWSKI / SpringerAfter publishing thousands of politicised emails during the US presidential election, Wikileaks has turned its focus to the US intelligence services Julian Assange and his team have published more than 8,761 documents that are claimed to be from the US Central Intelligence Agency (CIA). The trove of documents, dubbed Vault 7, is said to be the first batch of disclosures to reveal the CIA's hacking toolkit. The series is the largest internal security disclosure in history, WikiLeaks says. "This extraordinary collection provides a new window into the CIA's operations, gives its possessor the entire life of the CIA. The archive appears to have been circulated among former U.S. government hackers and contractors in an unauthorized manner, one of whom has provided WikiLeaks with portions of the archive."Here's what you need to know:The fourth release of WikiLeaks's CIA files, dubbed Grasshopper, dropped on April 7. Within the files are 27 documents, which the leaking organisation says were used by the CIA to build "customised malware payloads for Microsoft Windows operating systems". "Grasshopper is provided with a variety of modules that can be used by a CIA operator as blocks to construct a customised implant that will behave differently, for example maintaining persistence on the computer differently, depending on what particular features or capabilities are selected in the process of building the bundle," WikiLeaks says in a statement published alongside the documents.The documents themselves mostly consist of user guides that relate to different computer system modules.For instance, the 107-page Grasshopper-v1 1-AdminGuide explains it defines the modules and payloads needed for a person to build an "operation". Elsewhere, the organisation explains the documents talk about using malware that has been previously used by Russian organised crime units and also provides advice how CIA code can be used to avoid Microsoft security tools.Wikileaks claims the documents provide insights into how the CIA builds "modern espionage tools" and makes use of vulnerabilities in Windows computers.Part three of Wikileaks's CIA disclosures, which was first made public on March 31, focusses on the agency's anti-forensics tools called Marble Framework. "Marble is used to hamper forensic investigators and anti-virus companies from attributing viruses, trojans and hacking attacks to the CIA," WikiLeaks says in its release of the documents.In total Wikileaks has published 676 source code files that it claims are from the CIA. The technology Wikileaks discusses focusses on how the CIA's code is designed to make it easier for those writing malware to disguise who created it.For instance, the organisation says Marble has five templates in multiple languages for person creating malware to set their spoils for being Chinese, Russian, Korean, Arabic and Farsi. This, CIA created malware could potentially be developed to appear as if it was coming from another country. The CIA has not commented on the disclosures.Wikileaks says: "The Marble source code also includes a deobfuscator to reverse CIA text file obfuscation". Unlike previous disclosures in the Vault 7 files, Wikileaks has made the source code for Marble Framework public as it does not specifically contain any vulnerabilities. Previous releases from the files have not included source code as security vulnerabilities have been directly contained within them.Released to the public on March 23, 2017, the second set of documents has been called 'Dark Matter'. Like with part one, it is said to include details of the CIA's global hacking program, and these documents describe hacking methods allegedly used by the agency to access Apple devices and upload data.As Wikileaks explains: "Dark Matter contains documentation for several CIA projects that infect Apple Mac firmware (meaning the infection persists even if the operating system is re-installed) developed by the CIA's Embedded Development Branch (EDB). "In particular, the documents explain the techniques used by CIA to gain 'persistence' on Apple Mac devices, including Macs and iPhones using, among others, the 'Sonic Screwdriver' project. As explained by the CIA, Sonic Screwdriver was a 2012 "mechanism for executing code on peripheral devices while a Mac laptop or desktop is booting". This would allow an attacker to boot its software from a USB stick, for example, "even when a firmware password is enabled".The files reveal the CIA used it to install malware on Thunderbolt-to-Ethernet adaptors, like the Thunderstrike 2 exploit detailed at Black Hat in 2015. Apple fixed the exploit after the Black Hat disclosure meaning the CIA can no longer use that particular exploit to take over Macs.Elsewhere, the DarkSeaSkies project involved "an implant that persists in the EFI firmware of an Apple MacBook Air computer" and consists of "DarkMatter", "SeaPea" and "NightSkies".Apple has responded to the disclosures from Wikileaks by saying it has completed a preliminary investigation on the new information.Based on our initial investigation, the alleged iPhone vulnerability affecting iPhone 3G only and was fixed in 2009 when iPhone 3GS was released, the company said in a statement. Additionally, our preliminary assessment shows the alleged Mac vulnerabilities were previously used in all Macs launched after 2013. It continued to say it has not negotiated with Wikileaks to be provided with information. Apple said: Thus far, we have not received any information from them that isnt in the public domain.Released to the public on March 7, 2017, the first set of documents was called 'Year Zero' by Wikileaks. Two of the most significant documents showed the CIA's iOS and Android exploits. The iOS issues are detailed here and Android vulnerabilities here.In the iOS documents: the security issues detailed are all given codenames, such as the Eldersipguy, Juggernaut, and Winterspys. Listed in the details are the types of access (e.g. API); the types of access the code run (kernel and remote exploits are featured); what version of iOS the law works for; descriptions of the issues; and who it was found by (GCHQ, the NSA, and more are featured). Apple has since said the flaws highlighted in the documents had already been fixed in past patches.For Android, there are details on the name, descriptions, proof-of-concept name; what devices are affected; whether it was purchased from a partner; and the type of issue found.However, it isn't just mobile phones that are covered in the documents, web browsers such as Chrome, and even smart TVs have previously undisclosed security vulnerabilities discussed. Google also confirmed that Chrome and Android were not putting people at risk. "We've reviewed the documents and we're confident security updates and protections in both Chrome and Android already shield users from many of these alleged vulnerabilities," said Heather Adkins, Google's director of information security and privacy."Our analysis is ongoing and we will implement any further necessary protections. We've always made security a top priority and we continue to invest in our defenses." One of the exploits found in smart TVs was called 'Weeping Angel'. The documents show Weeping Angel targeted the Samsung F8000 Smart TV. They say the TV could be turned into "covert listening devices" by putting the TV into "take-off" mode. When the televisions appeared to be off, it was possible for conversations to be recorded. The CIA documents, which are from 2014, state 'future work' on the vulnerability could include capturing video from the televisions and being able to leave Wi-Fi turned on while 'fake-off' mode was enabled.Critics of the documents' content have said they show how the CIA works with other security agencies around the world to create vulnerabilities that can access the personal data stored on mobile phones and other devices. For instance, NGO Access Now said the CIA documents would be working with companies. "Many of these vulnerabilities could have been responsibly disclosed and patched," the NGO's senior legislative manager, Nathan White, said in a statement.Also in the documents, the majority of which remain unread and unveiled by journalists, are suggestions that vehicle systems, the Internet of Things and more may be targeted by the CIA in the future.Year Zero also details how the CIA's malware targets Windows, OSX, and Linux routers using USB sticks, software on CDs, and more. It is said CIA rules on how malware should be created include instructions to stop it being tracked back to the US. Wikileaks continued: "CIA hackers developed successful attacks against most well known anti-virus programs".Possibly the biggest question of all. The CIA has neither denied nor confirmed whether the documents are real, saying it does not comment on the "authenticity or content of purported intelligence documents". It is not uncommon for security agencies and law enforcement bodies to take this approach.Former NSA contractor and whistleblower Edward Snowden tweeted to say the documents "look authentic". "Program & office names, such as the JQJ (IOC) crypt series, are real. Only a cleared insider could know them," he wrote.It is well known, from Snowden's own disclosures and also a group called the Shadow Brokers, that US officials can hack into devices and systems. The New York Times says it is "likely" the new Wikileaks' documents are real.Also, Wikileaks has a history of publishing accurate documents obtained from its sources: its Collateral Murder videos showed US military bombing civilians in Iraq.However, Wikileaks, arguably, lost credibility for its connections to Russia; promoting links to databases with sensitive personal information; and defending Mike Pompeo's use of CIA assets to spy on the Chinese president, Xi Jinping. amidst the usual buzz of pop culture and global events, a seismic shift occurred in the world of intelligence. While Beyoncs pregnancy announcement and the Super Bowl dominated headlines, Wikileaks quietly set off a bombshell that would shake the foundations of global cybersecurity and espionage. Through a series of cryptic tweets, Wikileaks introduced the world to "Vault 7," a collection of leaked CIA documents that revealed the extent of the agency's cyber-espionage operations. The revelations not only exposed the CIA's covert activities but also sparked debates about privacy, national security, and the ethics of state-sponsored hacking. Whistleblower Edward Snowden has tweeted that the leak appears to be authentic.

The Prelude: Cryptic Tweets and Conspiracy Theories

On February 4, 2017, Wikileaks began a cryptic Twitter campaign that left the online world abuzz with speculation. The initial tweet asked, "What is Vault 7?" and was accompanied by an image of the Global Seed Vault in Norway, a facility often linked to conspiracy theories. Each day, Wikileaks released a new tweet paired with an enigmatic photograph: a Nazi gold vault, an engine test at Langley Air Force Base, fake newspaper covers, and finally, a woman mailing a letter under surveillance by the East German secret police.

The internet erupted with theories. Some believed it was a continuation of the Hillary Clinton email saga, while others thought it might be connected to World Trade Center Building 7 or even the cryptographic puzzle organization Cicada 3301. However, the true nature of Vault 7 remained a mystery until March 7, 2017, when Wikileaks unveiled the full scope of its leak.

The official Vault 7 logo used by Wikileaks during the release

Vault 7: Year Zero

On March 7, 2017, Wikileaks released a torrent link to an encrypted set of files labeled "Vault 7: Year Zero." The following day, they tweeted the passphrase needed to decrypt the files: a famous John F. Kennedy quote: "SplinterItIntoAThousandPiecesAndScatterItIntoTheWinds."

With this release, Wikileaks disclosed 8,761 CIA documents detailing the agency's cyber-espionage tools and techniques developed between 2008 and 2016. This was the largest leak of classified intelligence documents in history.

Wikileaks reveals the decryption passphrase for Vault 7: Year Zero

The Tools of Espionage

The Vault 7 documents revealed a vast array of tools and exploits used by the CIA to infiltrate and control electronic devices around the world. Some of the most notable tools included:

- Weeping Angel: A software developed in partnership with the UK's MI5 that turned Samsung smart TVs into covert listening devices, even when they appeared to be off.
- Sonic Screwdriver: A tool that allowed the CIA to execute malicious code on Mac computers during their boot process, bypassing security measures and maintaining control over the system.
- Hive: A command and control framework that enabled the CIA to manage malware implants on compromised systems and extract sensitive information covertly.
- Scribbles: A tool designed to embed tracking beacons in documents likely to be stolen, allowing the CIA to monitor who accessed the files.

These tools, along with many others detailed in the leak, demonstrated the CIA's ability to carry out sophisticated cyber-attacks, often using techniques that left little trace of their origin. The documents also revealed that the CIA had a practice of stealing malware from other nations, such as Russia, and repurposing it for their own operations to mislead forensic investigators.

Diagram of the Hive Command and Control Framework from the Vault 7 documents

The Fallout and Consequences

The immediate aftermath of the Vault 7 release was chaotic. The CIA, forced to acknowledge the leak, faced significant embarrassment and criticism for its security practices. Wikileaks founder Julian Assange held a press conference, where he condemned the CIA for hoarding vulnerabilities rather than disclosing them to software manufacturers, thus putting the public at risk.

A criminal investigation was quickly launched in the United States, focusing on identifying the source of the leak. Joshua Schulte, a former CIA software engineer, was arrested and later charged in connection with the leak. Schultes trial was fraught with controversy, including allegations of his involvement in illegal activities unrelated to the leak, which further complicated the case.

In this courtroom sketch, Joshua Schulte, center, is seated at the defense table flanked by his attorneys during jury deliberations, March 4, 2020, in New York.

The Legacy of Vault 7

Vault 7 remains one of the most significant intelligence leaks in history, shedding light on the dark world of state-sponsored hacking and cyber-espionage. The release not only exposed the CIA's methods but also raised important questions about the balance between national security and privacy in the digital age.

For those interested in delving deeper into the Vault 7 documents, they remain available for public download. You can access them via the original torrent link provided by Wikileaks: Download Vault 7: Year Zero, using the passphrase: SplinterItIntoAThousandPiecesAndScatterItIntoTheWinds.

For a more detailed exploration of the events surrounding the Vault 7 leak, you can watch the video that delves into the story of Joshua Schulte and the repercussions of his actions: When a CIA Hacker Goes Rogue.
