Want to use WhatsApp from your computer? While there's no standalone WhatsApp client, you can use WhatsApp's web app and desktop client to send messages via your smartphone. Here's how to use WhatsApp on your Windows PC, Mac, or other type of computer. Should You Use WhatsApp on the Web or Download the App? The desktop app and the web interface are very similar, but there are a few critical differences. The big ones are featuresthe WhatsApp web interface doesn't allow you to place audio or video calls. Given that limitation, we'd generally recommend that you use the desktop client whenever you can. Click the phone or video camera icon in the upper right corner to start a voice or video call respectively. Once you're in a video call, you can even share your screen if you want. Just click the screen share button at the bottom, then select the window you'd like to share. The major advantage you get from accessing WhatsApp through your browser is convenience. You can use WhatsApp Web from any desktop browser (all major browsers like Safari, Chrome, Firefox, and Edge are supported) on any operating system. You'll also get notifications for new messages. You can even use it on PCs that you can't install apps on (like a public computer), but you should exercise caution if you do that. Use a private window, make sure to log out, and keep in mind that software on the PC may be able to snoop on what you send and receive. Download the WhatsApp App on Your Windows PC or Mac If you want a dedicated app, you can use the WhatsApp Desktop application for Windows and macOS. If you don't want to use the link, you can always search "WhatsApp" in the Microsoft or Apple Stores. For added features, you can even use third-party apps. ChatMate for WhatsApp ($2.99) is a great alternative for Mac users. If you don't want to use the app, just continue to the next section. Connect Your WhatsApp Account to the Desktop App or the Browser The process of connecting your iPhone or Android smartphone to WhatsApp Web or WhatsApp Desktop is the same. We'll walk you through the process of using WhatsApp Web. Open your favorite browser and go to web.whatsapp.com. Here, you'll see a QR code on the right side of the screen. Now, you'll have to scan the QR code using your iPhone or Android smartphone. If you're using an Android smartphone, tap the "Menu" button from the toolbar in the top-right corner, then select the "Linked Devices" option. Select "Link a Device" in the next Window. Now, point your smartphone's camera at the QR code. In a second, the QR code will be scanned, and you'll be logged in to WhatsApp Web. If you're using an iPhone, go to the "Settings" tab, then tap "Linked Devices." In the next window, tap "Link Device." Finally, point the iPhone camera at the QR code. Once it's scanned, WhatsApp Web will show all of your messages.You can click a message to open it and send messages to anyone. You can do almost everything on WhatsApp Web that you can from your smartphone. You can send GIFs, photos, videos, documents, emojis, and more. To allow message notifications in your browser, click the "Turn On Desktop Notifications" button. Then confirm from the pop-up to allow notifications for WhatsApp Web. (This pop-up will depend on the browser that you're using.) Once you're done using WhatsApp Web, make sure to log out. To do this, click the "Menu" button from the top toolbar and then choose the "Log Out" option. Use WhatsApp constantly for both work and personal chat? Here's how to secure your WhatsApp account. WhatsApp has become the most popular messaging app in the world, but it has also leaped off mobile devices and onto our browsers. Many of us value seeing our messages come onto our computer screens in real-time as we work, and WhatsApp gives us the option to reply more easily and quickly using our computer keyboards. Heres everything you need to know about WhatsApp Web and how to get started using it.Editors note: We used a Google Pixel 7 running Android 14 to develop these steps. We also verified the steps work on Apple devices using an iPhone 12 Mini running iOS 17.2.What is WhatsApp Web, and how does it differ from the desktop app?Edgar Cervantes / Android AuthorityWhatsApp Web is the online browser version of the mobile app. It enables you to receive your messages on your computer screen in real time, reply by typing on your keyboard, start new conversations andgroups, and search chat histories. You can receive message notifications from your browser if you have them enabled in the browser settings.However, unlike desktop and mobile apps, it doesnt allow you to make telephone and video calls. You also cant change your status. So there are a few shortcomings with the browser version but nothing that would be a deal-breaker.What are the differences between WhatsApp Web and the mobile app?Edgar Cervantes / Android AuthorityThe differences between the web version and the mobile app are the same as the desktop app. The mobile app gives you the full WhatsApp experience with all the bells and whistles. The browser version misses things like calling, video calls, and status updates.Setting up the browser version of WhatsApp is very quick and easy. The following steps assume you already have an account on the mobile app. If not, you need to do that first.On your computer, launch your browser and go to web.whatsapp.com.Now, launch WhatsApp on your phone.On Android, tap on the three-dot menu icon and select Linked devices. On iPhone, tap on the Settings tab and select Linked devices.Tap on Link a device.Use the phones camera to scan the QR code on the browser.Thats it. After a few seconds, your chats will be accessible through WhatsApp Web.You need to bear in mind a security vulnerability when using the browser version. When you close the browser tab or the browser completely it doesnt log you out of your WhatsApp account. If youre worried about your privacy, its essential to sign out of your WhatsApp account before closing the browser.On your smartphone, launch WhatsApp.On Android, tap on the three-dot menu icon and select Linked devices. On iPhone, tap on the Settings tab and select Linked devices.Tap on the linked computer.Hit Log out.One of the most common complaints people make about WhatsApp is the lack of an iPad version. Until Facebook rectifies that problem, WhatsApp Web is an excellent alternative to use on the tablet. The process is very similar.Open a browser on the iPad and go to web.whatsapp.com.You will see the QR code on the screen.Follow the same smartphone steps mentioned above to connect your iPad to WhatsApp.If youre using the Safari browser, you can even make an icon for the screen by tapping the Share button and choosing Add to Home Screen in the menu.The only downside to using WhatsApp on an iPad is that the notifications are pretty terrible. Youre relying on the browser to deliver the notifications, not WhatsApp. So unless you dont need to reply to messages immediately, you would need to keep the browser open and the iPad window awake to see incoming new messages.FAQsCan you video chat on WhatsApp Web?No, video calls are unavailable on WhatsApp Web.Can you make a phone call on WhatsApp Web?No, like video chatting, audio calls are also unavailable on the browser version of the app.Can I update my status on WhatsApp Web?No, you cant update your status on WhatsApp Web.Thank you for being part of our community.
