OCR stands for Optical Character Recognition, which is a technology to recognize text from images of scanned documents and photos. PDF stands for (Portable Document Format), where the document layout looks the same despite the underlying operating system or hardware used to view the document. PDF document can contain text, images, hyperlinks, embedded fonts, videos, forms, and many more. There are 3 types of PDF documents: Editable PDF: The PDF is created digitally by any software such as MSWord and consists of text and images, where you can search, select, and edit the document in easily using any PDF reader. Scanned PDF: The PDF consists of images created by either scanning a hard document using a scanning device or an image (jpg, png, tiff) captured by an imaging device such as a mobile or digital camera. You can not search, select, nor edit the document text unless you use an OCR service such as i2OCR. Searchable PDF: The PDF consists of an image layer of a scanned document and a text layer under it as a result of an OCR service (such as i2OCR) applied to the image layer. You can search, select, and edit the document. This type of PDF is usually called PDF/A, where "A" stands for archiving. i2OCR converts PDF to text in 2 steps: first, it converts PDF into images, then recognize text of the selected image. Nowadays Khmer Unicode is widely used in both private and public because it is easy, fast to learn to type and it basically write base on Khmer spelling order.Now Khmer unicode have many fonts to use with differents styles and supports various applications. Khmer Unicode fonts are now availabe both free and paid version. Khmer Unicode on Window has two standard which is Khmer Unicode that come with Microsoft Windows 8, 8.1 and windows 10 (use Spacebar keyboard to input vowel - not most used) and the most use is Khmer Unicode Nida Standard which use letter "J" to insert vowel.
